

STOP PROPOSING NEW IR TECHNIQUES

AND LET'S FIND OUT WHAT THE PROBLEM OF

EXISTING TECHNIQUES IS!!!

(PS: VSM RULEZ!)

-VASIR ALI

Should

2V+AS

Can we standardize a frame of
reference for ^{positioning} ~~judging~~ tools and
tool papers?

i.e. → list of "viewpoints" that should
be included (not views *per se*)

- * user viewpoint
- * efficiency viewpoint
- * historical viewpoint
- * availability viewpoint
- * usage/application viewpoint (audience)

...

Suggestions from community:

→ What types of stemming evaluation would benefit your text-based research?

→ other problems, measures, etc?

→ What other aspects of ~~the~~ searching source code should

be taken into account?

query length? IR Model?

other aspects of the query?

other aspects of the problem?

Underlying premise of work:

Porter stemmer is not necessarily the best stemmer for all ST problems
